MAKE A MULTIPLE-CHOICE QUIZ IN SCRATCH

You'll Need

- ▶ LibreOffice – Install it from the command line with:
`sudo apt-get install libreoffice`
- ▶ List of capitals by size – wiki.pe/List_of_national_capitals_by_population
- ▶ Internet access

Click to answer. The answer data comes from a list on Wikipedia

The game runs for 30 seconds before it ends

Dazzle your friends with your own quiz game, containing hundreds of questions! How many can they get right in 30 seconds?

Lists are used to remember lots of information, but adding items to them block by block can take a lot of time and Scratch code. In this project, you'll see how you can import (or bring in) large lists from other places, so you can easily make a quiz game with hundreds of questions. As you create this game, use your own favourite background and sprites, and arrange them with enough space for the answers to appear. Perhaps you can add your own question list? Anything works, as long as each answer only applies to one question.

>STEP-01 Gather your data

For this game, you'll need two text files: one for the questions and one for the answers. We're going to make a quiz about capital cities, so one file will contain a list of capitals, and the other will contain the countries they are in, in the same order. Start by finding the list of capital cities by population on Wikipedia. Click and drag

over the table to highlight it and then press **CTRL+C** to copy it. It's easier if you highlight from the bottom up. Be patient when the screen scrolls!

>STEP-02 Create your question files

Start LibreOffice Calc and paste in the table using **CTRL+V**. Click OK. This might take a minute or two to work. Click above your cities column to highlight it.

Rank	Country/Territory	Capital	Population	Year
1	China	Beijing	20,995,000 ⁽¹⁾	2012
2	India	New Delhi	11,188,000 ⁽²⁾	2012
3	USA	Washington, D.C.	6,093,000 ⁽³⁾	2012
4	South Korea	Seoul	10,208,714 ⁽⁴⁾	2011
5	Japan	Tokyo	12,147,000 ⁽⁵⁾	2011
6	Taiwan	Taipei	2,340,000 ⁽⁶⁾	2011
7	Canada	Ottawa	1,312,000 ⁽⁷⁾	2011
8	France	Paris	2,221,000 ⁽⁸⁾	2011
9	UK	London	8,245,119 ⁽⁹⁾	2010
10	USA	Washington, D.C.	6,093,000 ⁽¹⁰⁾	2010
11	USA	Washington, D.C.	6,093,000 ⁽¹¹⁾	2010
12	USA	Washington, D.C.	6,093,000 ⁽¹²⁾	2010
13	USA	Washington, D.C.	6,093,000 ⁽¹³⁾	2010
14	USA	Washington, D.C.	6,093,000 ⁽¹⁴⁾	2010
15	USA	Washington, D.C.	6,093,000 ⁽¹⁵⁾	2010
16	USA	Washington, D.C.	6,093,000 ⁽¹⁶⁾	2010
17	USA	Washington, D.C.	6,093,000 ⁽¹⁷⁾	2010
18	USA	Washington, D.C.	6,093,000 ⁽¹⁸⁾	2010
19	USA	Washington, D.C.	6,093,000 ⁽¹⁹⁾	2010
20	USA	Washington, D.C.	6,093,000 ⁽²⁰⁾	2010

Above You can get a well-organised list of capital cities from this page on Wikipedia

Rank	Country/Territory	Capital	Population	Year
1	China	Beijing	20,995,000	2012
2	India	New Delhi	11,188,000	2012
3	USA	Washington, D.C.	6,093,000	2012
4	South Korea	Seoul	10,208,714	2011
5	Japan	Tokyo	12,147,000	2011
6	Taiwan	Taipei	2,340,000	2011
7	Canada	Ottawa	1,312,000	2011
8	France	Paris	2,221,000	2011
9	UK	London	8,245,119	2010
10	USA	Washington, D.C.	6,093,000	2010
11	USA	Washington, D.C.	6,093,000	2010
12	USA	Washington, D.C.	6,093,000	2010
13	USA	Washington, D.C.	6,093,000	2010
14	USA	Washington, D.C.	6,093,000	2010
15	USA	Washington, D.C.	6,093,000	2010
16	USA	Washington, D.C.	6,093,000	2010
17	USA	Washington, D.C.	6,093,000	2010
18	USA	Washington, D.C.	6,093,000	2010
19	USA	Washington, D.C.	6,093,000	2010
20	USA	Washington, D.C.	6,093,000	2010

Above Copy the capital cities table from Wikipedia into LibreOffice Calc to make it easy to extract the columns separately

Press **CTRL+C** to copy the column. Open your text editor, Leafpad, which is in the Accessories menu. Press **CTRL+V** to paste. You should now have a text file containing just capital cities, each one on a new line. If you have a heading at the top (the word 'Capital'), delete it, and remove any blank lines at the end too. Save this file as **cities.txt**. Open a new file in Leafpad and repeat the process with the countries column in LibreOffice Calc. This time, save your Leafpad file as **countries.txt**.

>STEP-03

Importing your data into Scratch

Start Scratch. Click the Variables button and make a list. Call it **cities** and make sure it's for all sprites. When the empty list appears on the Stage, right-click it and click **import** in the menu. Browse to the files you just created, and double-click your cities text file. The list on the Stage will be filled with the cities from your file. Repeat the process to make a list called **countries** and fill it with your countries file. Your list files should be the same length. Right-click the list boxes on the Stage and choose **hide**.

>STEP-04

Set up your variables

Through the Variables part of the Blocks Palette, make variables called **question number** (used to remember which question/answer pair we're asking), **score**, **shuffle choice** and **temporary storage** (used for shuffling the list of options), and **wrong answer** (used when making the list of wrong options). You also need to make a variable called **player guessed** to remember which answer the player chooses, and a list called **possible answers**. Make all these variables and the list "for all sprites".

>STEP-05

Make the main game code

The main game code uses three scripts (Listing 1). Add them all to the cat sprite. The game uses broadcasts to pass control to the various parts of the program, including on the same sprite. The 'ask a question' section picks a random question number from the list of countries and makes a list of possible answers. It includes the correct answer, and two wrong answers which must be different from the correct answer. The code then shuffles this list to put the answers in a random order, before using a broadcast to make the answer sprites appear and show their answers.

>STEP-06

Make the answer sprites

Import a new sprite to use for showing the answer. We're using Gobo. This sprite has five short scripts (Listing 2). Make the variable **answer choice**, but click the button to make it for this sprite only. If the game shows all the same answers when you run it, you probably made a mistake here! When you've finished this sprite, right-click it and duplicate it twice. In the copies, change the value of the **answer choice** variable at the top to 2 for the first one and 3 for the second one. Happy quizzing!

LISTING 1

```

A
when clicked
  set score to 0
  hide variable score
  broadcast ask a question
  reset timer
  wait until timer > 30
  broadcast game over
  show variable score
  stop all

B
when I receive ask a question
  set question number to pick random 1 to length of countries
  delete all of possible answers
  add item question number of countries to possible answers
  repeat 2
    set wrong answer to question number
    repeat until not wrong answer = question number
      set wrong answer to pick random 1 to length of countries
  add item wrong answer of countries to possible answers
  repeat 5
    set shuffle choice to pick random 1 to 3
    set temporary storage to item shuffle choice of possible answers
    delete shuffle choice of possible answers
    insert temporary storage at any of possible answers
  say join What is the capital of item question number of countries
  broadcast show answers

C
when I receive guessed
  if item player guessed of possible answers = item question number of countries
    say Correct! for 1 secs
    change score by 1
  else
    say join The right answer is item question number of countries for 2 secs
  broadcast ask a question
  
```

LISTING 2

```

when clicked
  set answer choice to 1
  set size to 50%

when I receive show answers
  show
  say item answer choice of possible answers

when Sprite2 clicked
  set player guessed to answer choice
  broadcast guessed

when I receive guessed
  hide

when I receive game over
  hide
  
```
